

August 9, 2008

Dear Matt,

I want to thank you for keeping me up to date on the latest technology in ophthalmic equipment, specifically the Huvitz Digital Refractor and the Huvitz Wavefront Auto Refractor and Keretometer.

As you know I had reached the point of seriously considering retirement. After so many years of using the old phoroptors, my right shoulder was giving me so much pain I didn't look forward to going to work. Also quite frankly it was getting a bit boring.

After you installed the Huvitz Digital Refractor and Wavefront Auto Refractor & Lensometer my attitude completely changed. What a joy it is to work with this equipment. No more sore shoulder pain or headaches. Everything is right in front of me and at my fingertips.....with a touch of a button the tech has sent to the digital refractor the patients present RX and the auto refractors information. The digital refractor is so fast and accurate. I see a large number of Native Americans who have high amounts of astigmatism so it is nice to have a refractor that goes up to 8 ¾ cylinder. It is a joy to use and the patients absolutely love it too.

The wavefront auto refractor is amazing and by far the best auto refractor I have ever used. The cylinder and axis is so accurate it is hard to believe.

Something I hadn't considered when I decided to get this equipment is the number of referrals it would bring in. It has been astounding.

I haven't loved coming to work like this since I was a young optometrist. I can't imagine practicing optometry without this equipment.

I know you and Tom must be proud to bring this quality of equipment to the ophthalmic community.

Keep up the good work,

Dr. Ralph Lightle
Optometrist
